

# WATER QUALITY DIRTY WATER ISSUES

FOR CUSTOMERS OF

## Borough of South River

Issued July 16, 2019

PWSID#NJ1223001

Please be advised that the South River Water Department is issuing a dirty water advisory for certain customers. This advisory is being issued due to increased water flows from the treatment plant due to increased water demands. You may notice an increase of dirty water that is sediment from the water storage tank and the mains outside your home. Recent bacteria tests were all negative and there is adequate disinfection throughout the water system. The water system is addressing the water treatment plant and will provide localized flushing where needed to minimize the dirty water issues. We will continuously monitor our progress and we are working closely with the NJDEP. We will report back regularly on this website.

The following precautionary measures are strongly encouraged after repairs have been completed and implemented:

- Run your water faucets for 3-5 minutes to flush your service connection and interior plumbing with water from the service main.
- Empty and clean your automatic ice makers and water chillers.
- Service connections with a water softener/cartridge filters should be run through a regeneration cycle or other procedures recommended by the manufacturer.
- Water reservoirs in tall buildings should be drained and refilled (as applicable).

**This advisory will remain in effect until sample test results show an improvement in water quality**

The NJDEP Case Number assigned to this event is #19-07-14-1655-31

Thank you for your patience. If customers have any questions, please contact the Borough Administrator Arthur Londensky at 732-257-1999 x120.
