RESOLUTION

WHEREAS, the Governing Body of The Borough of South River, Middlesex County desires to apply for and obtain a Post-Sandy Planning Assistance grant from the New Jersey Department of Community Affairs (DCA); and

WHEREAS, The Borough of South River, Middlesex County has reviewed and is familiar with the New Jersey Department of Community Affairs grant application process; and

WHEREAS, The Borough of South River, Middlesex County has applied for Post-Sandy Planning Assistance grant funding for the following planning activities and in the following amounts:

- 1. A Strategic Recovery Planning Report in an amount not to exceed \$10,000.00; and
- 2. A Community Development and Neighborhood Resiliency Plan; Repetitive Loss & Flood Hazard Area Acquisition & Management Plan in an amount not to exceed \$50,000.00; and

WHEREAS, The Borough of South River, Middlesex County now desires to separate the above Community Development and Neighborhood Resiliency Plan into two (2) sub-plan elements and apply for funding for each separately, and now intends to apply for an additional Post-Sandy Planning Assistance Grant funding for a Ratable Replacement Plan/Fiscal Impact Analysis Plan in an amount not to exceed \$20,000.00;

NOW THEREFORE BE IT RESOLVED that the Governing Body of The Borough of South River, Middlesex County does hereby authorize the application for the above grant(s); and

BE IT FURTHER RESOLVED that The Borough of South River, Middlesex County has sustained a loss attributable to Superstorm Sandy of at least three million, eight-hundred-ninety thousand, six-hundred (\$3,890,600.00) dollars of assessed value, corresponding to a (2014) property tax loss of approximately two-hundred-sixty-eight thousand, eight-hundred forty (\$268,840.00) dollars as indicated by the attached documentation from the tax assessor; and

BE IT FURTHER RESOLVED that The Borough of South River, Middlesex County recognizes and accepts that DCA may offer a lesser or greater amount of grant funding than that requested; and

BE IT FURTHER RESOLVED that The Borough of South River, Middlesex County authorizes the execution of the grant agreement in the amount offered and approved by DCA and further authorizes the expenditure of funds pursuant to the terms of the grant agreement entered into by The Borough of South River, Middlesex County and DCA; and

BE IT FURTHER RESOLVED that The Borough of South River, Middlesex County agrees to comply with all CDBG-DR regulations, Post Sandy Planning Assistance Guidelines and also accepts that the proposed use(s) of CDBG-DR funds are not reimbursable by FEMA or other federal agencies; and

BE IT FURTHER RESOLVED the persons whose names appear below (or any successor or assign) are authorized to sign the grant agreement or any other document in connection therewith.

Re: Borough of South River
Middlesex County
Floodplain Neighborhood Acquisition
Plan via
Community Development Block Grant-
Disaster Recovery

Introduction

This Floodplain Neighborhood Acquisition Plan has been prepared in accordance with the New Jersey Department of Community Affairs' Community Development Block Grant - Disaster Recovery Action Plan ("CDBG-DR") and the Post Sandy Planning Assistance Grant Program Description and Guidelines. The program engages professional planners to evaluate the impacts of Superstorm Sandy on the communities they serve.

The impact of Superstorm Sandy on the Borough of South River was originally noted in the Borough's 2014 Strategic Recovery Planning Report. Approximately 180 properties in the Borough were heavily impacted by the storm and listed on the Borough's "Flood Impacted Properties List." Several dozen of those properties are now eligible for acquisition and are being acquired via the State

of New Jersey's Green Acres / Blue Acres property acquisition program. The program purchases flood-prone or flood damaged property, pays for the removal and demolition of all site improvements, and dedicates the remaining vacant land to open space.

This Floodplain Neighborhood Acquisition Plan has been created to bring that unsystematic program of property buyouts into the community planning process. It attempts to organize those acquisition activities currently underway in the Borough with a series of maps intended to better inform Borough decision-makers on important matters of floodplain planning and disaster recovery. This report contains detailed storm impact mapping, an inventory of impacted properties, a geographic analysis of repetitive loss areas, mapping of critical infrastructure, concept areas for future acquisition, a target and eligibility analysis for property acquisition, and a framework for long-term green infrastructure restoration planning in Blue Acres target areas. This plan should also serve as a documentation tool for the Borough's actions and progress as it moves forward from the impact of Superstorm Sandy.

Background

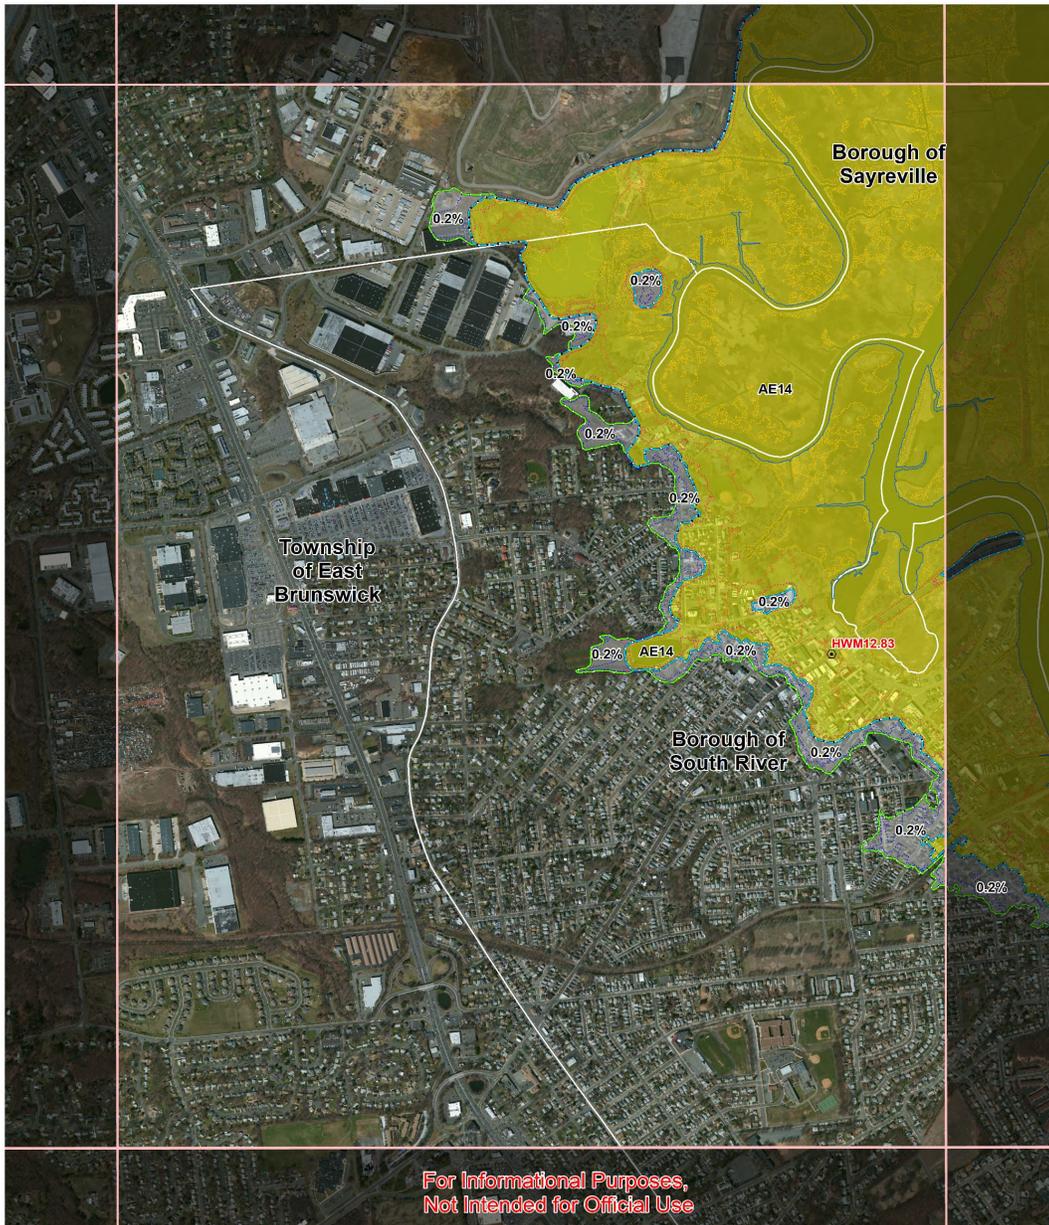

What is now The Borough of South River was originally formed as the Town of Washington within East Brunswick Township in 1870 and later incorporated as an independent borough by an Act of the New Jersey Legislature in 1898. The Borough is located in the central portion of Middlesex County, south of the Raritan River and east of the South River and contains a total area of 2.9 square miles of which, 2.8 square miles is land and 0.1 square miles is water. According to the US Census Bureau, the 2013 Borough population of the Borough is 16,236 persons. The Borough borders the Township of East Brunswick to the west and The Borough of Sayreville to the east. The Borough is named after the South River waterway which flows along that common municipal boundary between the Borough of South River and the Borough of Sayreville. The South River flows northward into the Raritan River near the Borough's northern boundary and is heavily impacted by tidal flow.

At the beginning of the 20th Century, because of its inland riverfront, the Borough was a magnate location for industrial manufacturing and shipping. Several dozen multi-story manufacturing buildings were built on the Borough's eastern waterfront abutting the waterway. A dense development pattern of worker housing, hotels, and rooming and boarding houses were later constructed in neighborhoods

surrounding these waterfront industries. Factories operated round-the-clock during both world wars producing equipment and textiles for the war effort and were staffed by a local resident workforce. Neighborhood commercial and civic uses were also built in these waterfront areas to support the working-class residents residing there.

As manufacturing declined, the Borough suburbanized into the New York Metropolitan region. While economic revitalization has redeveloped many similar turn-of-the-century manufacturing neighborhoods in surrounding communities, the Borough has experienced little redevelopment of these former manufacturing areas. To this day, the western riverfront of the South River remains developed with these neighborhoods of single-and multi-family residential homes, houses of worship, retail, commercial and former industrial/manufacturing uses. The Borough is shown below in FEMA Panels 0134 and 0153 where a western growth line can be seen encroaching into the South River's floodplain. In some areas, development, including one-story residential homes have been built right up to the river. Unfortunately, this entire riverfront area is built within a low-lying floodplain which experiences frequent and devastating floods, and has for several decades.

The Need for a Floodplain Neighborhood Acquisition Plan

The need for a Floodplain Neighborhood Acquisition Plan was generated from the CDBG-DR Strategic Recovery Plan Report prepared by this office and adopted by the South River Planning Board and Borough Council in 2014. In that report, three (3) framework priorities for action were adopted. They were:

Priority: Participate in the Federal Emergency Management Agency’s National Flood Insurance Program (NFIP) - Community Rating System at the highest level of certification attainable

Priority: Map Repetitive Loss Areas in conjunction with the Community Rating System Requirements and use that mapping to create a Property Acquisition Management Plan.

Priority: Create a plan and mapping framework to manage Blue Acres property acquisition through all phases of activity.

To accomplish these priorities, this plan includes the following goals and objectives which have been organized into six (6) plan elements. These plan elements represent a significant post-sandy policy change relative to how the Borough deals with flood-prone neighborhoods. This change was articulated in the 2014 Strategic Recovery Planning Report. Previous community planning goals for flood-prone neighborhoods were predicated on construction of a federal flood control levee on the Borough’s eastern waterfront. Borough leadership now recognizes that once flood-damaged properties have been removed from flood-prone areas, the floodwall project may never be constructed, as a levee would no longer be effective in protecting floodplain development that has already been removed. Instead, the Borough has encouraged homeowners to embrace the Blue Acres program and accept NJDEP’s offers of buyout funding for their properties. The Borough, from a policy perspective, believes that this approach will be a more cost effective way to secure life and property from future flood damage. This change recognizes that many property owners in floodplain areas

subject to repeated flood damage can not, and should not, economically bear the cost of mitigation above FEMA's Advisory Base Flood Elevation levels. This Floodplain Neighborhood Acquisition plan prepares for this alternative outcome.

Goals of the Floodplain Neighborhood Acquisition Plan

In an effort to address the action items prioritized above and from the 2014 Strategic Recovery Planning Report, the elements of this Floodplain Neighborhood Acquisition Plan shall be:

- Element I:** Creation of a Flood Damaged Property Map and Planning Information Reference (Flood Zone Analysis, Damage Assessment, and Repetitive Loss Assessment) for each affected property listed in the Repetitive Loss Area Map.

- Element II:** Creation of a "Repetitive Loss Area" Map to directly satisfy NFIP Community Rating System requirements.

- Element III:** Creation of a Property Acquisition Map & Targeting Plan.

- Element IV:** Creation of a Blue Acres Transition Status Map to track the process of participating properties in their transition from "Impacted" status to final Blue Acres property.

- Element V:** Creation of a Vulnerable Critical Infrastructure Map in the Borough in reference to flood hazard areas.

- Element VI:** Creation of a conceptual framework for future green restoration in new open space areas.

Borough Costs of “Participation”

While the capital funding for property acquisition and demolition costs of participating in the program are provided by state and federal appropriations, administration and coordination of the program is a burden placed entirely on the Borough. Borough administrators are desirous of a mapping plan to track and analyze the progress of the Blue Acres properties. This needs to be done by means of monitoring subject properties through the stages of eligibility, acquisition, buyout, title assumption, demolition, and ultimately addition to the Borough’s open space inventory. This monitoring needs to be shown both spatially via mapping applications, and financially, via a fiscal impact analysis. The Fiscal Impact Analysis is being completed under separate cover. This report is intended to serve as a mapping plan to address that element of the process.

Element I: Flood Impacted Properties Mapping

Flood Impacted Properties List and Map

Approximately 184 homes and businesses in the Borough were significantly damaged by Superstorm Sandy. Of those 184 properties, approximately 40 buildings have been classified by FEMA as “Substantially Damaged/Substantial Improvement” (SD/SI). All 184 properties are listed on the Borough’s **Flood Impacted Properties List**. Many of the affected properties have been subject to flood damage at least three (3) times in the last eight (8) years. All of these impacted properties are located on the Borough’s eastern waterfront in several neighborhood clusters. At the time of this report, many of these properties were vacant. These properties are notable as they form the most comprehensive set of flood-damaged properties the Borough has ever compiled. This list also forms the basis for the Community Rating System **Repetitive Loss Properties List** in the other elements of this plan and also was the basis for the initial **Blue Acres Target Properties List**. The property list is shown on the following pages, followed by a **Flood Impacted Properties Map** showing the location of all 184 parcels: (Note: The small size of the parcels appear to be deceiving, however 184 are shown on the map.)

Element II: Repetitive Loss Mapping for the National Flood Insurance Program

Community Rating System

Borough leadership has, through its Strategic Recovery Planning Report recognized one of the most lasting impact of Superstorm Sandy, long after physical repairs have been made to damaged dwellings and property, will be the changes to the Flood Hazard Rate Maps promulgated by the Federal Emergency Management Agency, and the National Flood Insurance Program (NFIP) regulations based on those maps. The revised mapping and regulations will result in the imposition of higher flood insurance premiums for several hundred, if not thousands, of homeowners in the Borough. In July 2013, the *Asbury Park Press* published the following FEMA graphic showing projected flood insurance rates under the new program guidelines.

Estimated flood insurance rates	
If the lowest floor of your house is...	New National Flood Insurance estimates for AE zone homes*
4 feet above base flood elevation, your estimated rate will be:	\$553
At base flood elevation, your estimated rate will be:	\$1,815
4 feet below base flood elevation, your estimated rate will be:	\$10,723

* Annual rate for a single-story house covered for \$250,000 with no more than \$100,000 in contents, located in a high-risk AE zone, with elevation certificate. The prior subsidized rate was \$3,600 a year regardless of elevation. No rates for the highest risk V zone have been established yet.
Some homes built before 1975 will continue to be subsidized.
Source: Federal Emergency Management Agency

The NFIP does however offer the opportunity to help alleviate a portion of the cost of flood insurance premiums via a program called the Community Rating System (CRS). Participation in the Community Rating System of the National Flood Insurance Program could ultimately reduce homeowners' flood insurance premiums by as much as 45%. Individual homeowners can not apply. Participation is required on a community basis, making it an ideal opportunity for community planning action. To participate, the Borough must take certain actions relative to its repetitive loss properties, including mapping of the surrounding areas which constitute a "repetitive loss area." Repetitive loss areas include repetitive loss properties found on FEMA's repetitive claim list and neighboring buildings that were subject to the same flood as those on FEMA's list. **This plan element is intended to serve as the repetitive loss area map to satisfy this NFIP/CRS requirement.**

Steps to Mapping Repetitive Loss Areas (NFIP Coordinator’s Manual Section 501 through 503)

- Step 1.** Plot the list of repetitive loss properties on a map of the Borough. That property list of approximately 85 properties is show on the following pages as the **Repetitive Loss Properties List**. That map is show on the following pages of this report and identified as a **Repetitive Loss Properties Map**.

- Step 2.** Plot nearby properties that have received at least one flood insurance claim. That property list of approximately 175 properties is show on the following pages as the **Historical Claims List**. These are listed as “Historical Claims” in the NFIP records for the Borough. That map is show on the following pages of this report and identified as a **Historical Claims Map**.

- Step 3.** Overlay topographic or imagery to identify areas that are obviously lower in elevation that repetitive claim areas. That map is shown on the following pages of this report.

- Step 4.** Create geometry for similarly situated properties to show a “Flood Hazard Area”. That map is show on the following pages of this report and identified as a **Flood Hazard Area Map**.

- Step 5.** Field-check the boundaries. This was conducted in February 2015.

- Step 6.** If many repetitive loss areas properties exist and are spread throughout the community or flood-plain a community, the entire community can be declared a repetitive loss area.

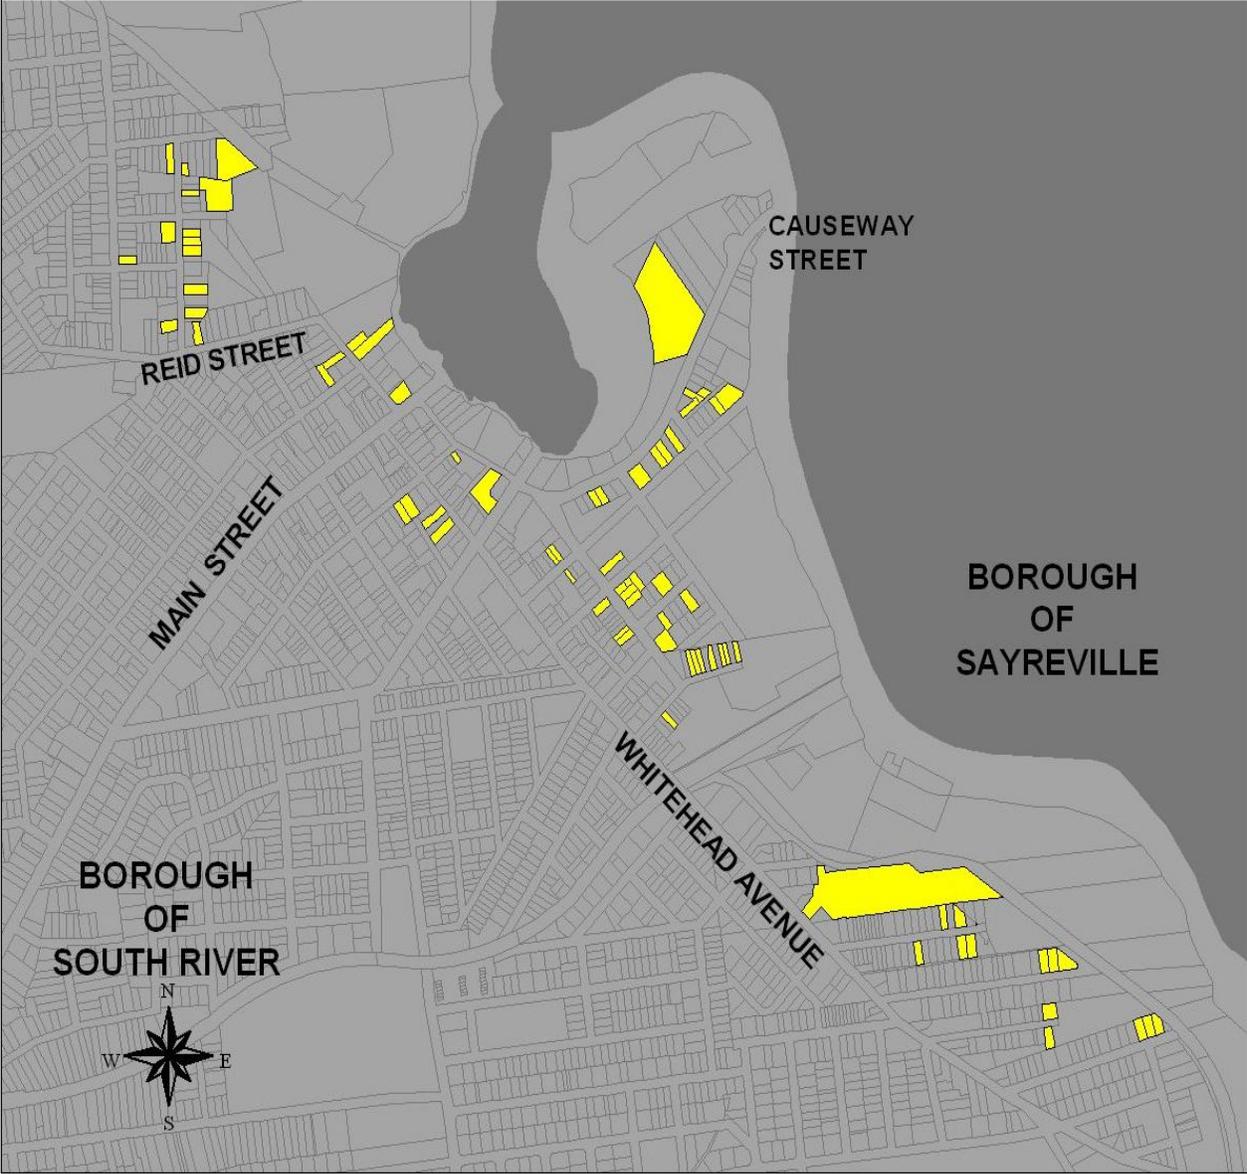

- Step7.** After the repetitive loss areas are identified, a list must be prepared of all improved parcels in those areas. An improved parcel is one with an insurable building on it. A **Repetitive Loss Area Property List** has been compiled from all properties located within the **Flood Hazard Area Map** and are shown on the following pages of this report. The Repetitive Loss Area Property List indicates “Yes” if an insurable building is present, and “No” or “Vac” if it does not or if the parcels contain vacant land. Borough ownership is indicated by “Boro.”

Element III: Blue Acres Target Property Mapping

Blue Acres Acquisition Program

The New Jersey Department of Environmental Protection administers the Blue Acres Program in similar fashion to the more popular Green Acres Program. While the Green Acres Program is popularly thought of as a land acquisition program, the Blue Acres Program is intended to, “acquire land in the floodways of the Delaware River, the Passaic River, the Raritan River, and their respective tributaries, and other areas of New Jersey that are prone to flooding, and to dedicate those lands that are purchased for recreational and conservational purposes.” Eligible properties are those which have been damaged by flooding and/or which are prone to storm-related flooding, or property which can buffer or protect other property from such damage.

Applicants apply directly to the NJDEP and provide extensive background information about the property, including its current land use and history, its most recent tax assessment, annual property taxes, municipal zoning information, latest flood impact information, tenant and mortgagee/mortgager status, the closest water body, and flood elevation certificate information. Property owners need to disclose if they have a National Flood Insurance Program insurance policy (flood insurance), if any claim has been made against the policy, and if any payments have ever been made from the NFIP. Applicants disclose the status of any local development (subdivision or other) approvals, and propose an “asking price” for the property and buildings. The program is intended for willing sellers only. Property owners are notified that the sale of the property is a negotiation, and that both parties may fail to agree on a purchase price. If both parties do not come to agreeable terms, no sale occurs and eminent domain powers will not be invoked by the government. Funding was made available by state Bond Acts of 2007, 2009 and subsequent federal Post-Sandy appropriations.

The process requires the retention of a qualified appraiser to prepare an appraisal report. State certifications are required and appraisers must follow industry standard practices. Most importantly, with Post-Sandy related appraisals, the “date of value” is established as the day before the storm. Once closings have transpired, property owners turn over house keys to the Borough. Demolition bids are solicited and contracted by the NJDEP. After the work is completed, the NJDEP transmits a “Demolition Completion Letter” to the Borough. To date, approximately 36 of these letters have been transmitted.

Buyout areas are concentrated in South River's Historical Flood-prone Neighborhoods

The Borough has a chronic history of flooding problems associated with the South River. The beds and banks of the South River are subject to tidal flooding when the river overflows during yearly storm events, Hurricanes, nor-easters, or even during times of non-storm high tide. The Borough's flooding problems mirror the issues in the neighboring Borough of Sayreville which experienced similar, although more publicized damage from Superstorm Sandy. In the neighboring municipality, approximately 196 homes are targeted for acquisition and demolition. Most are located along the South River waterway. The waterway and its floodplain are shown in the image below.

Flood-prone neighborhoods generally fall into four geographic areas:

- East of Whitehead Avenue

- The entire Waterfront Revitalization Zoning District,
- The Ferry/Reid Street Corridor, and
- North of Reid Street.

For illustrative purposes, these areas are shown above in the map from the 2011 Master Plan highlighted in blue. In the Waterfront Revitalization Zone in particular, development has been constructed up to the banks of the South River. This area contains Hermann, Martin, Little Martin, Causeway, Elizabeth, Lee, and Freeman Streets, which are all popular street locations in the several property listings in other elements of this report.

From the original **Flood Impacted Properties List**, the Borough has created the following **Blue Acres Target Property List**. The list contains 75 individual properties. Fifty seven (57) out of the seventy five (75) properties were found on the Borough's initial **Flood-Impacted Property List**. Eighteen (18) additional, adjacent or nearby properties not on the Borough's initial **Flood Impacted Properties List** are also found on the **Blue Acres Target Properties List**. Within these impacted areas, the Borough is strongly encouraging all properties which are eligible to participate in the Blue Acres acquisition program to do so while funding is available. This list was compiled for the "first round" of NJDEP Blue Acres buyout eligibility. This round contains applications filed before May 28, 2013. Any property owner who filed an application to the Blue Acres program after that day may be considered for future rounds of funding as it becomes available. The following NJDEP press release was issued to promote the first home demolition in the Borough, a former dwelling located at Water Street. The **Blue Acres Target Property List** follows the press release.

STATE OF NEW JERSEY
DEPARTMENT OF ENVIRONMENTAL PROTECTION

PRESS RELEASE JULY 11, 2014

CHRISTIE ADMINISTRATION ANNOUNCES HOMES COMING DOWN IN SOUTH RIVER AS PART OF SANDY BLUE ACRES ACQUISITION PROGRAM

(14/P74) TRENTON – Demolition of homes in South River purchased by the state through the Superstorm Sandy Blue Acres Acquisition Program have begun this week, with a dozen houses in South River and Sayreville slated to come down over the next several weeks, Commissioner Bob Martin said today. Blue Acres is buying out more than 1,000 storm-damaged homes throughout the state as part of a \$300 million federally-funded program that is moving flood-prone homeowners out of harm's way. The properties will be converted to open space that will provide buffers against future storms and flooding.

A total of 132 homes in Sayreville and South River, adjoining Middlesex County municipalities hit hard by Sandy's storm surge, have been purchased thus far. A total of 254 homeowners in five communities have accepted offers from the state to buy their homes, with more than 900 homes currently approved for Blue Acres' Program purchases. The program only buys properties from willing sellers and focuses its efforts on larger, contiguous parcels that can provide greater flooding buffers and reduce the need for emergency crews to risk their lives in the event of rescues. So far, 16 purchased homes have been demolished in Sayreville. There have been 38 properties purchased in South River as part of the program. The first South River demolition this week was at 33 Freeman Street, the former home of Joseph Piluso. The sale of that home closed February 14 of this year, and sold for \$170,406. All homes in the Blue Acres program are bought at pre-Sandy market values.

"We are happy that demolitions in South River have begun," said South River Mayor John Krenzel. "It is another step in our recovery from Sandy. We are optimistic about the future and that the area will be reclaimed by nature and used as a nature preserve." The demolition contracts have been bid through the State Division of Property Management & Construction (DPMC).

DEP is making purchases of homes through the Blue Acres program in other Sandy flood-impacted communities. In addition to Sayreville and South River, the DEP has secured funding or is targeting funding for potential buyouts in Woodbridge, East Brunswick, Newark and the Delaware Bay community of Lawrence Township. This effort demonstrates significant progress toward the Administration's goal of buying at least 1,000 homes in tidal areas affected by Sandy and another 300 properties in other towns, such as Manville and communities in the Passaic River Basin, that have repeatedly flooded.

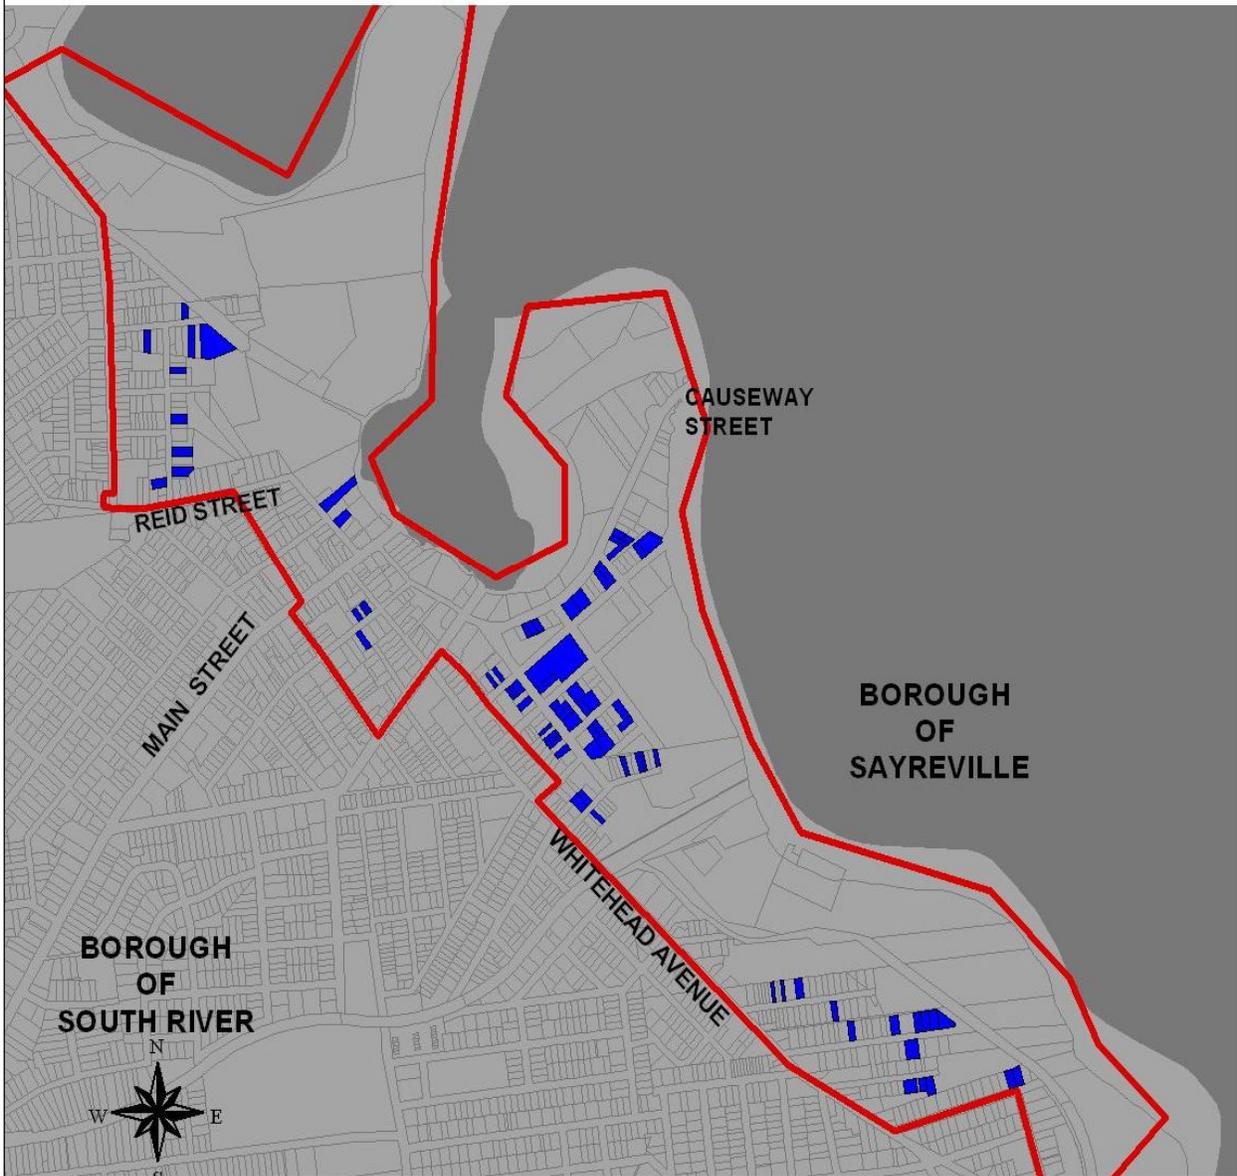

The Blue Acres Superstorm Sandy Program was launched May 16, 2013. FEMA's Hazard Mitigation Grant Program will provide 100 percent of the funding for buyouts in Sayreville and South River, plus Woodbridge. Additional federal funding to acquire other properties impacted by Superstorm Sandy is expected to be provided through the \$1.46 billion second round of federal Community Disaster Block Grant (CDBG) Disaster Recovery funds allocated to New Jersey by the U.S. Department of Housing and Urban Development (HUD). [Some portions of this release have been edited for format from its original edition]

**Borough of South River
Blue Acres Program**

**Blue Acres Target Properties Map
±75 Properties**

Element IV: Buyout Status Mapping

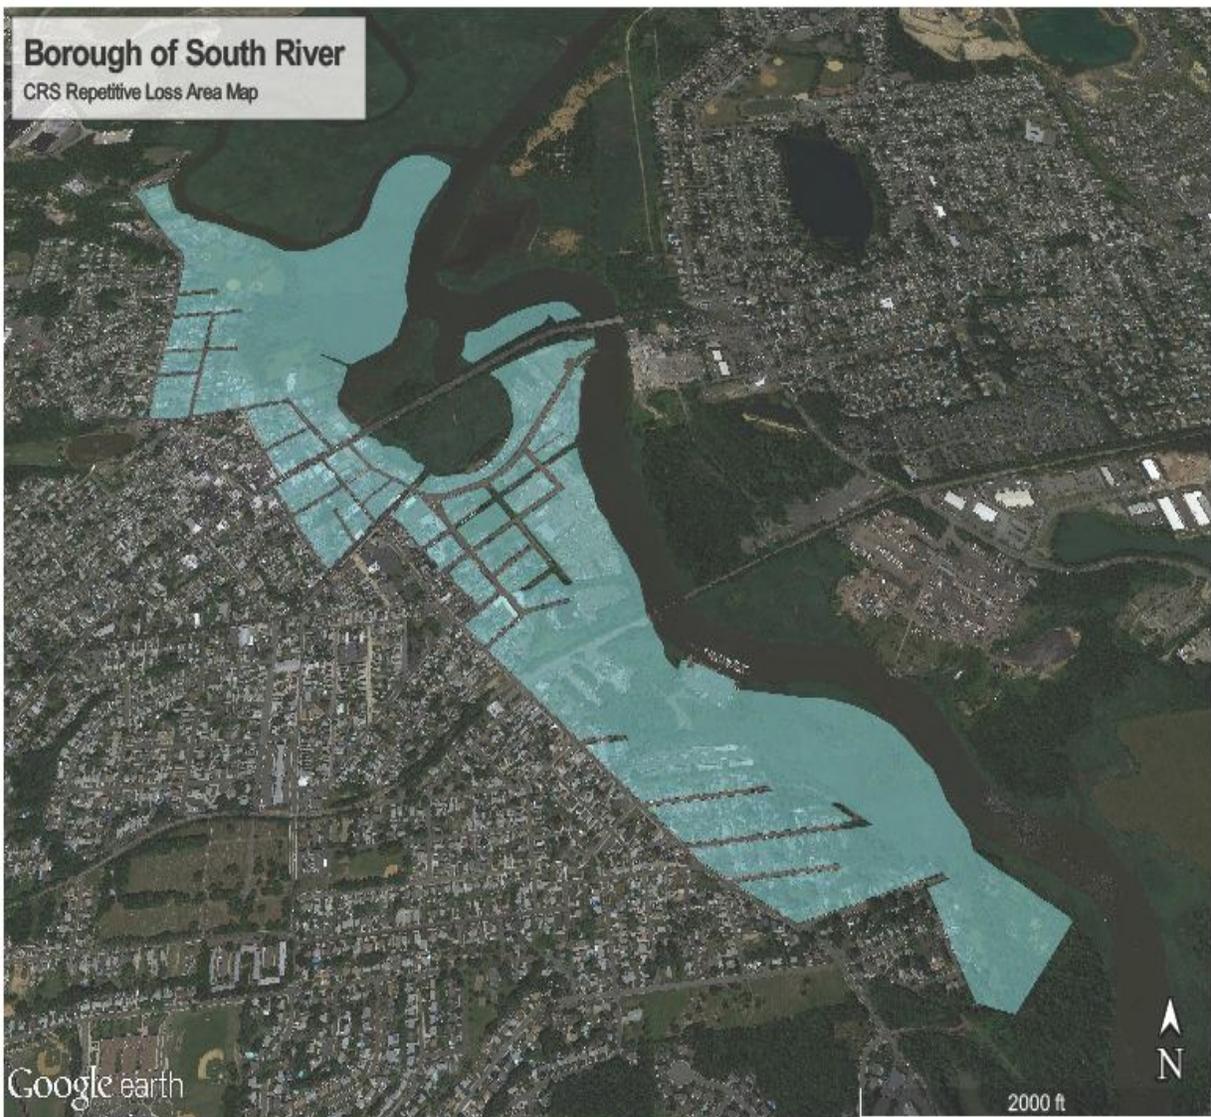

Property Acquisition Status Map

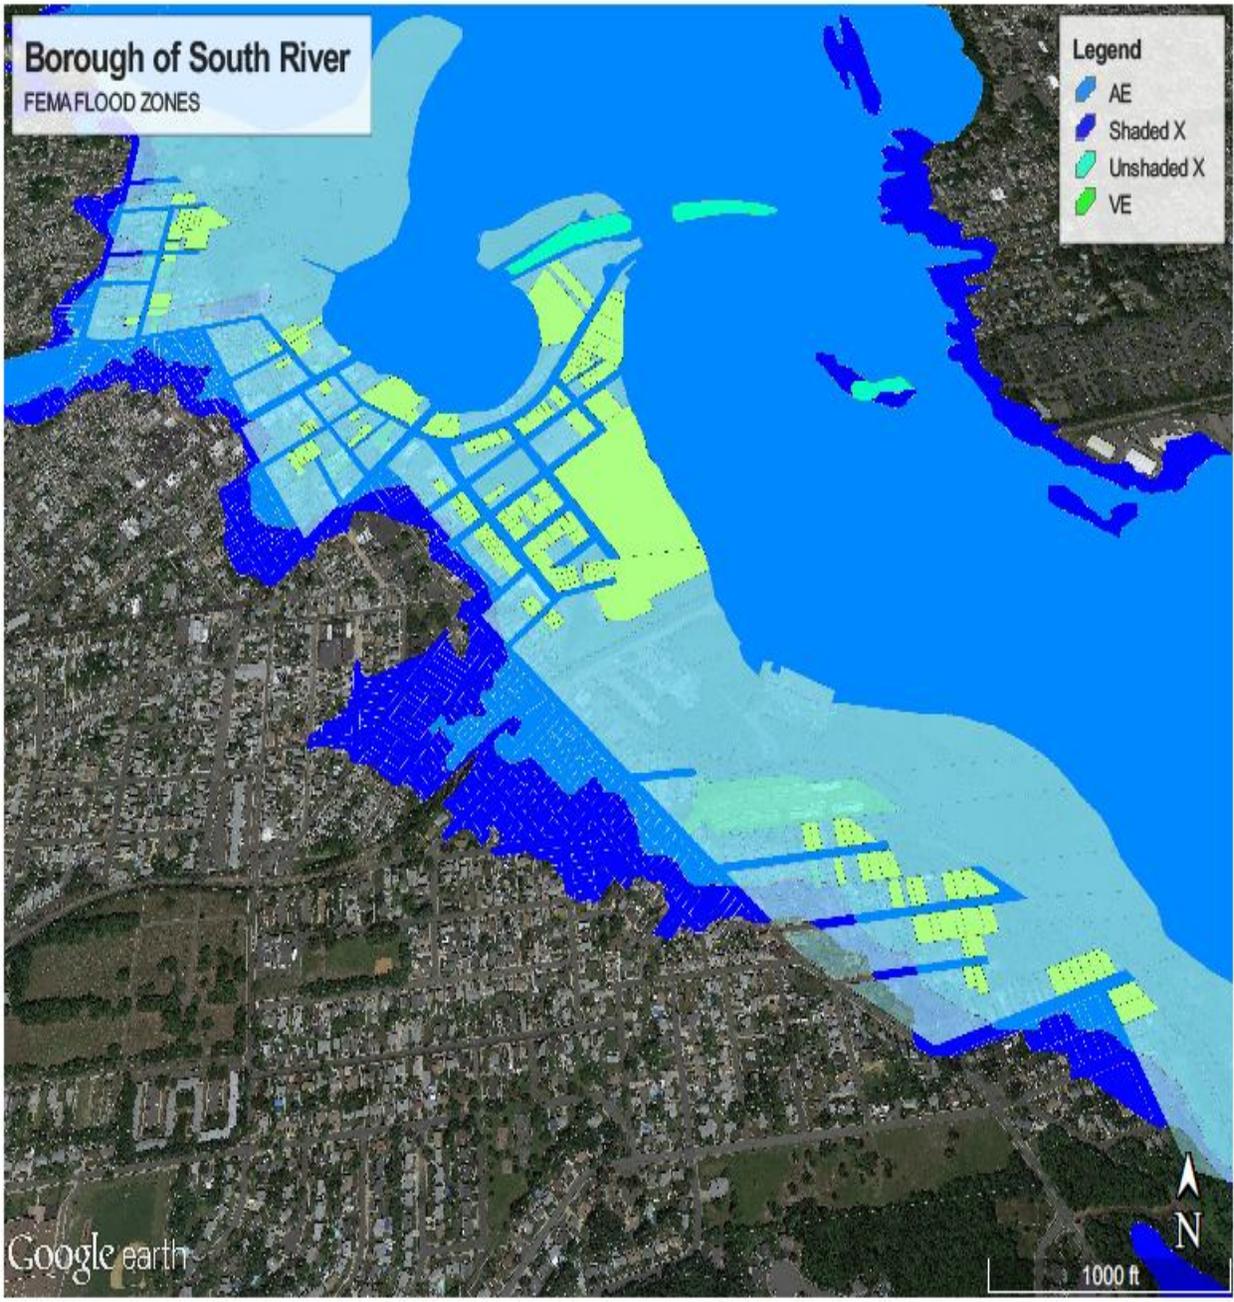

This element of the plan involves creation a custom mapping application for the Borough. The purpose of this real-time mapping is to all Borough leadership to spatially view and systematically track the progress of properties participating in the Blue Acres buyout program. Two software applications were considered: *ArcGIS for Tablet* computers was considered for its ability to natively view and edit shapefiles, and the Professional Version of Google Earth, known as *Google Earth Pro*, was considered because of its ease of use and familiarity with the general public. Both mapping engines require a yearly subscription and /or licenses. In the end, the Google Earth Professional product was chosen and was installed on a new touch-screen laptop/tablet computer. (Acer Aspire V5-122P-0408 AMD A4-1250 X2 1.0GHz 4GB 500GB 11.6" Touch Win8 - Model#: NX.M8WAA.007) Seven (7) individual custom maps were created and edited in ArcGIS 3.x and imported into Google Earth Pro. These maps were saved on the software program as a native .kml files. The combination of the richness of ArcGIS shapefiles and the familiarity of Google Earth present useful mapping tool for the Borough. The custom maps include:

- A Blue Acres Status Map
- FEMA Floodplain Zone Map
- FEMA Floodplain Boundary Map
- South River Borough Parcel Map
- CRS Historical Claims Map
- CRS Repetitive Loss Properties Map
- CRS Repetitive Loss Area Map

The Blue Acres Status Map presents all ±75 properties on the Blue Acres Target Properties List in a color-coded format. Red polygons represent parcels which have been demolished. Yellow polygons represent parcels which have declined participation or elevated their buildings. Shades of orange parcels represent parcels that are still technical “participating in negotiations” in the program or with an unknown status. A user can also click on any parcel on the map and will see a “pop-up” text box identifying the Block and Lot and the Blue Acres Status of the property. A screenshot of the application is shown below followed by the CRS Repetitive Loss Area Map alone, and then overlaid with the FEMA Floodplain Area Map.

Element V: Critical Infrastructure Mapping

This element of this plan intends to provide a framework for a future planning effort described in the 2014 Strategic Recovery Planning Report. The report identifies the concept of a Critical Infrastructure Mapping and Hardening Plan. In it, an initial list is compiled of all critical infrastructure locations and facilities in the Borough. Critical infrastructure facilities are public safety locations, equipment, buildings, utility stations and other elements most important to the operation of the Borough during a time of widespread emergency, such as Superstorm Sandy.

The infrastructure list is then prioritized into tiers of priority based on importance in a flood or similar emergency situation. Tier 1 facilities are conceptually the most essential facilities for public health safety and welfare operation of the Borough. Tier 2 facilities are secondary facilities for Borough operations. Tier 3 facilities are necessary facilities for community resiliency. These are specific facilities currently existing in the Borough, not hypothetical concept areas.

The priority listing is found below in priority order. The final, and most essential item of this element is to geographically map these locations relative to the Borough's floodplain, flood zone and flood hazard areas which have been mapped in previous elements of this plan. All facilities found within or near to the flood "danger zones" should be high priority for relocation and/or secondary power generation capability.

Tier 1 Critical Infrastructure Facilities and Locations

(Shown in red)

- 1:1 Borough Police Headquarters
61 Main Street

- 1:2 Borough Fire Department
28 George Street

- 1:3 Borough Fire Department
Appleby Avenue and 3rd Street

- 1:4 Borough Fire Department
Raritan Avenue & Jackson Street

- 1:5 Borough Rescue Squad Building
Thomas Street

- 1:6 South River High School (Shelter facility)
Montgomery Street
- 1:7 South River Municipal Building
48 Washington Street
- 1:8 Department of Public Works Facility & Gasoline Pumps
Ivan Way
- 1:9 Office of Emergency Management Mobile Command Trailer
Mobile

Tier 2 Critical Infrastructure Facilities and Locations

(Shown in Pink)

- 2:1 Borough Sewer Pumping Station: (Rebuilt 2015)
Jackson Street & Causeway
- 2:2 William Street Sewer Pumping Station
William Street near Brick Plant Road
- 2:3 Borough Water Tank
Ivan Way
- 2:4 Borough Water Tank
Appleby Avenue and 2nd Street
- 2:5 Borough Electric Utility Substation
Willett Avenue & Union Avenue
- 2:6 Well House/Water pumping station at River Road and Veterans (Block 380, Lot 105)
- 2:7 Wireless Communications Monopole
Causeway
- 2:8 Wireless Communications Monopole
Ivan Way
- 2:9 Wireless Communications Monopole
William Street
- 2:99 Wireless Communications Antennas
Appleby Avenue and 2nd Street

Tier 3 Critical Infrastructure Facilities and Locations

(Shown in Orange)

- 3:1 All Banking Facilities / Automatic Teller Machines
PNC Bank – 55 Main Street
Bank of America – 25 Main Street (Closed)
Provident Bank – 6 Jackson Street

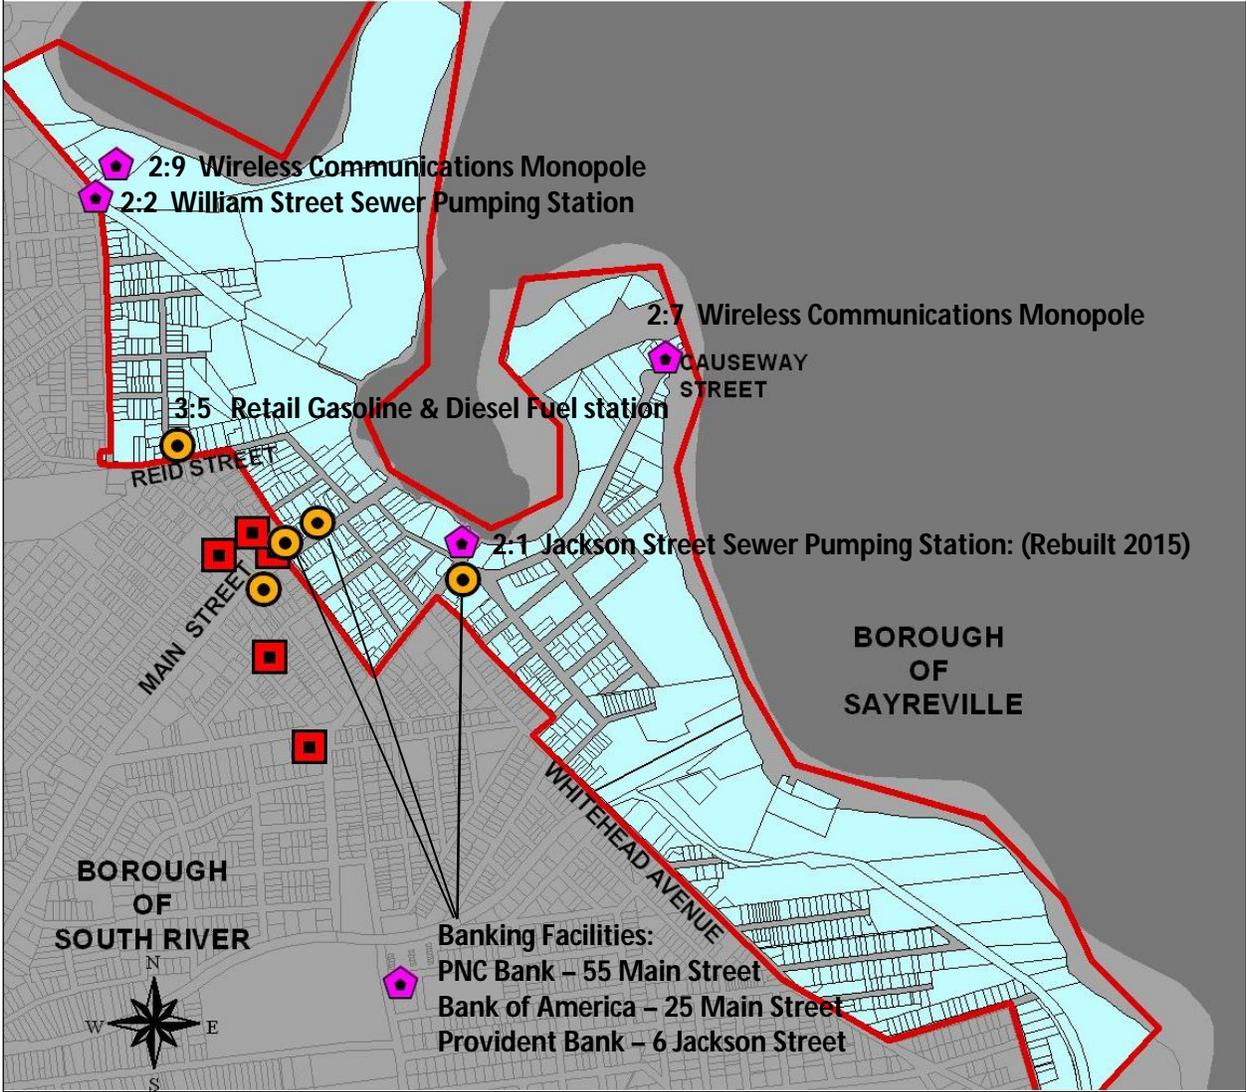

- 3:2 All Borough Food stores greater than 2,500 sf of gross floor area of food sales
Bravo/Tropical Supermarket - 62 Main Street

- 3:3 Borough Retail Gasoline and Diesel Fuel stations
Old Bridge Turnpike and Main Street

- 3:4 Borough Retail Gasoline and Diesel Fuel stations
Old Bridge Turnpike and North End Drive

- 3:5 Borough Retail Gasoline and Diesel Fuel stations
Reid Street and William Street

Critical Infrastructure Facilities Map & Flood Hazard Area Map

Element VI: Concept Restoration Framework for Green Infrastructure

Pre-storm Planning Construct

Before Superstorm Sandy, development in the Borough of South River was guided by a 2011 Comprehensive Master Plan and 2012 Land Use Ordinance. These land use policies of the Borough have been formulated around the eventual construction of a “Hurricane and Storm Damage” protection surge barrier spanning the South River for a length of 320 feet, with a clear opening of 80 feet, and two (2) combined levees containing ±10,712 linear feet long with floodwalls (1,655 feet long) constructed along the east and west bank of the South River in the Boroughs of Sayreville and South River. Interior drainage facilities and pump stations are also included in the design. This flood control project has been fully designed and approved by the Army Corps of Engineers via the Water Resources Development Act of 2007, however, no construction has occurred as the United States Congress has yet to fund the project. Part of that project included proposed areas for constructed wetlands and storm-water management.

Although the overall surge barrier plan may no longer be a realistic element of the USACOE plan, this report recommends that the Borough seek to have the wetlands restoration and storm-water management elements of that plan re-integrated into a revised plan for floodplain restoration and green infrastructure for the newly created open space. The framework of this plan is outlined below.

Floodplain Restoration Goals

This plan intends to provide a concept framework for floodplain restoration planning, which should be the long term-goal of the Borough in the areas which have been subject to property buyouts. Overall goals should include:

- To establish a complex, naturally functioning, floodplain along the banks of the South River waterway
- To establish dynamically stable flood channels and riparian buffers along the waterway
- To restore native plant species and the removal of non-native or invasive species
- To restore fully-functioning wetlands where appropriate, with removal of legacy fill and sediments which block soil permeability
- To provide connections to the Boroughs existing storm-water management and storm drainage system
- To provide for a setback levee generally parallel to Whitehead Avenue to allow the river to meander to its natural extent
- To provide opportunities for green infrastructure and natural drainage systems

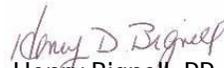

Public Participation and Comment

This Strategic Recovery Planning Report has been prepared in accordance with the regulations governing the CDBG-R and NJDCA SRPR process. Independent of these requirements, it is a well-established principal of participatory democracy and community planning that significant changes in land use policy be made available for public comment and be informed by public participation in the final decision-making process. It is therefore recommended that this report to be made publically available and be the subject of a public hearing before the South River Borough Council. Although not proposed as a formal Master Plan amendment at this time, the South River Planning Board may wish to make specific recommendations to the Borough Council relative to the findings of this report. Comments should also be solicited relative to rebuilding strategies, code and ordinance solutions, green building and environmental sustainability options and long-term viability of borough-wide infrastructure. Following public comments, the Borough Council may consider adopting this report as a framework document.

Certification

The original of this report was signed and sealed in accordance with N.J.S.A. 45:14A-1, et seq. and N.J.A.C. 13:41-1.1, et seq.

Very truly yours,
